

Umar Sabirin

DevOps Engineer | Platform, SRE & Cloud

umarsabirin369@gmail.com | LinkedIn | GitHub | +62 853-4177-0639 | Indonesia

PROFESSIONAL SUMMARY

DevOps Engineer with 1 year operating production infrastructure, built on 4 years of backend engineering in Go across distributed systems. Brings LLM-assisted automation to CI/CD and observability, and keeps platforms reliable and secure across cloud and bare-metal.

PROFESSIONAL EXPERIENCE

DevOps Engineer • Full-time – Apple Developer Institute for DevOps × S-Quantum Engine Mar 2026 – Present • Tangerang, ID

- Built infrastructure CI/CD in Jenkins for IaC (Terraform) and CaC (Ansible), with lint, test, and security gates.
- Cut pipeline stage time ~83% via parallelization, dependency caching, and selective re-runs.
- Integrated Infracost into the IaC pipeline to flag cost increases before provisioning.
- Automated hardened golden-image builds with Packer, applying CIS/STIG benchmarks and Trivy scans.
- Built cost- and security-aware observability (Prometheus, Grafana, ELK) with automated alerting.
- Built LLM-assisted CI/CD and monitoring automation that auto-fixes PRs on test failures, sends alerts, and analyzes root causes to speed up diagnosis.

Platform Engineer • Full-time – Maxcloud (PT Awan Data Indonesia) Jul 2025 – Mar 2026 • Bekasi, ID

- Built a Go engine multiplexing 19,400+ concurrent gRPC/SSE streams from 194 agents at millisecond latency.
- Built a custom Go orchestrator over QEMU/QMP, cutting VM boot to 2s (~300% faster than Proxmox).
- Sustained near-100% payment availability via multi-gateway failover (Xendit/Duitku) with rate limiting and 2FA.
- Cut tenant branding deploys from 45 min to <5s with a JSON-driven config system for 6+ enterprise tenants.
- Cut network provisioning ~40% with a self-service LBaaS on HAProxy + nftables at the kernel level.
- Built unit, integration, and smoke tests in Go for payment failover, gRPC lifecycle, and VM orchestration, gated in CI.

Software Engineer • Freelance / Self-Employed Mar 2023 – Jun 2025 • Remote

- Benchmarked 5 concurrency strategies in Spring Boot; Kafka sustained 2,683 req/s, ~3 orders over the sync baseline.
- Architected microservices (API, notifications, real-time chat) over RabbitMQ and WebSocket, with Elasticsearch search and ELK audit logging.
- Hardened production APIs with layered architecture, JWT/Sanctum auth, Redis caching, and rate limiting.
- Served as system architect and backend code reviewer for a multi-stakeholder government research platform.
- Delivered domain platforms across maritime (RBAC ops), retail (web admin + Python POS), and education (multi-role MIS).

Software Developer (Intern → Full-time) – Fairtech Pte Ltd Mar 2021 – Feb 2023 • Makassar, ID

- Improved multi-tenant query performance ~50% through targeted indexing and SQL refactoring on high-traffic tables.
- Built localized business logic across multiple Southeast Asian sites for Canon South East Asia.
- Integrated a shipping aggregator across 15+ couriers with caching, retries, and error handling for resilient checkout.
- Contributed to the production codebase via bug fixes and feature work under senior-developer mentorship.

Laboratory Assistant • Part-time – Hasanuddin University Aug 2022 – Dec 2022 • Makassar, ID

- Taught 200+ students in Web Programming and fundamentals of Java and Python.
- Evaluated assignments and provided one-on-one debugging and software-design guidance.

TECHNICAL SKILLS

Languages: Go (primary), PHP (Laravel), Java (Spring Boot), Groovy (Grails), Bash

Architecture & APIs: Distributed Systems, Microservices, Event-Driven, Multi-tenant Architecture,DDD, gRPC, REST, WebSocket

AI & LLM: LLM product integration, Prompt engineering, LLM-based PR review, AI-assisted CI/CD remediation & alerting, AI-assisted root-cause analysis, AI-assisted development (Copilot, Claude Code)

Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ, SQS

Cloud: AWS (EC2, EKS, S3, RDS, IAM, VPC, Auto Scaling)

Containers & Orchestration: Docker, Kubernetes

IaC & CaC: Terraform, Ansible

CI/CD: GitHub Actions, GitLab CI, Bitbucket, Jenkins

Observability: Prometheus, Grafana, Loki, Tempo, Mimir, Pyroscope, ELK, eBPF, OpenTelemetry

Security: CIS/STIG hardening, SonarQube, Snyk, Trivy, SAST, DAST, Vault (secret management), OPA/Rego, Kyverno, RBAC, 2FA, mTLS/TLS

Reliability: SLI/SLO/SLA, Error Budgets, Incident Response, RCA, Postmortems, MTTR/MTTD

OS: Linux

Virtualization: Proxmox, QEMU/KVM (QMP), LXC/LXD, ZFS, Bare-metal provisioning, PXE/netboot, cloud-init

Web & Proxy: Nginx, HAProxy

Networking: nftables, OpenVPN, DNS, IPv6/SLAAC

EDUCATION

Bachelor of Information Systems – Hasanuddin University Aug 2020 – Feb 2025

GPA: 3.82 / 4.00

Thesis: Web-Based Student MIS Design using Design Thinking (Case Study: Pondok Informatika).
